

Gas Regulator (Continued...)

4. Turn the control tap right round to the DISCONNECT position. On some regulators you may need to press a safety button to turn the control tap past the "off" position.
5. There may be a "quick release" regulator that disconnects simply by pressing the release button when the control tap is in the "off" position.
6. The complete regulator assembly can now be lifted off the top of the cylinder. Rest the regulator on the heater, taking care not to damage the hose and regulator.
7. Take any protective plastic cover off the valve connection on the new gas cylinder and save it for refitting to the old cylinder.
8. Check the valve connection on the new cylinder is the same as the one on the old cylinder. If it is different, do not try to fit the new cylinder. This could be very dangerous. Refit the old cylinder and contact the hire company.
9. If the valve connections are the same, remove the empty cylinder, cover its valve with the protective plastic cover taken from the new cylinder and put the empty cylinder in a safe location.
10. Put the new full cylinder in place in the heater. Remember to take care – the new one will be heavier than the empty one.
11. Place the regulator firmly in position on the cylinder valve and turn the control tap to the OFF position. This will lock the regulator to the valve. The heater is now ready for use.
12. If the heater has a "quick release" regulator place it in position on the cylinder valve and push down. This will lock the regulator to the valve. The heater is now ready for use.
13. If it is suspected that the cylinder connection is not gas tight, do not try to light the heater. Check that the control tap is in the OFF position. Contact the hire company immediately.
14. If the heater does not work properly, do not try to repair or adjust it – contact the hire company.

(Continued overleaf...)

1. There are several types of gas regulator available. This is the gas regulator that reduces the gas pressure to the required level for the heater to all incorporate the control tap.
2. Different size regulators assemble to different sizes of cylinder. Do not try to force or improvise connections if you have the wrong cylinder for the heater.
3. The various types of regulator may have different methods of being connected and disconnected with the gas cylinder. Follow the instructions below.

Gas Regulator

1. Turn the main control tap to the OFF position.
2. Wait until the flame has gone out completely. If the flame does not go out, call the hire company immediately.
3. Ensure there are no naked flames nearby and that the room is well ventilated.

CHANGING THE GAS CYLINDER

1. Turn the main control tap to the OFF position.
2. Do not move the heater whilst it is alight.
3. Before lighting the heater always know how to turn it off.

Turning off the Heater

1. Turn the main control tap to the OFF position.

Heater off

1. Turn the main control tap to the OFF position.

BUTANE GAS SAFETY (continued...)

1. Turn the main control tap to the OFF position.
2. Do not move the heater whilst it is alight.
3. Before lighting the heater always know how to turn it off.

Before Starting Work...

1. Turn the main control tap to the OFF position.

Using the Heater

1. Turn the main control tap to the OFF position.

Cabinet Heater

1. Turn the main control tap to the OFF position.

Cabinet Heater

The rules and procedures in force where people are at work may require the person responsible for this equipment to carry out a specific risk assessment.

It is important to read all of this leaflet BEFORE using the Cabinet Heater

1. Butane gas is highly flammable and must always be used with great care.
2. The heater is designed to provide general radiant and convected heat in adequately ventilated rooms.
3. Radiant heat from the heater can damage nearby objects as well as presenting a fire risk. Ensure there are no objects close enough to the heater to get hot.
4. Plan the use of the heater to ensure it can always be used safely. Remove any risk of objects catching fire or persons being burnt before leaving the heater unattended.
5. The heater must not be lit, moved or adjusted and the gas cylinder must not be changed by minors or by anyone under the influence of drugs or alcohol.
6. The heater is designed for operation by an able bodied adult. Anyone with either a temporary or permanent disability must seek expert advice before using it.

BUTANE GAS SAFETY

1. Keep gas cylinders upright at all times whether in use, in store or being moved.
2. If there is suspicion of there being a gas leak, turn off the heater using the control tap. Put out any naked lights or other sources of ignition. Ventilate the area by opening windows or doors.
3. Never look for a leak with a naked flame – this is always extremely dangerous. Use soapy water.

1. Do not use this heater where there is only used in flammable liquids and gases.
2. Risk from combustible materials, or fuel oil.
3. Ensure the heater is only used in rooms where the heater is not used in addition to other materials or other rooms where the heater is only used in flammable liquids and gases.
4. Use an additional fireguard if the heater is to be left unattended or if the heater does not get a good supply of fresh air the gas will not burn properly. Fumes from this burner will never move the position before the heater is not designed for use as a heat foot or boil water.
5. The heater is not designed for use as a room with children or infirm persons. Ventilation or a supply of fresh air if the heater is to be left unattended if the heater is not used in flammable liquids and gases.
6. Put the heater into position before igniting; never move the heater while it is lit.
7. Only use the heater upright on its wheels on a level floor. Do not lay it down or raise it on a stand.
8. Ensure the amount of condensation produced by the heater helps to reduce the amount can also help to reduce the amount of condensation produced by the heater.
9. Keep unused and empty cylinders away from heat at all times.

1. Handle cylinders carefully when moving them. Do not drop them off vehicles – get an assistant to help hold the cylinder when it is being moved.
2. Check the cylinder including fittings, hoses and cylinder caps.
3. Hold the cylinder firmly when found to be damaged, do not use the cylinder.
4. Check the cylinder for damage, if anything is found to be damaged, do not use the cylinder.
5. Check the cylinder for damage, if anything is found to be damaged, do not use the cylinder.
6. In some conditions, frost may form company immediately.
7. Do not try to warm the cylinder to help indicate that the cylinder is not big enough to provide the flow of gas.
8. Do not drop the cylinder off the cylinder when it is not in use. This indicates that the cylinder is not big enough to provide the flow of gas.
9. Do not attempt to repair any service and equipment the cylinder is leaking, call the fire service before the cylinder is leaking.

1. In some conditions, frost may form on a gas cylinder that the cylinder is not big enough to provide the flow of gas.
2. Do not attempt to repair any service and equipment the cylinder is leaking, call the fire service before the cylinder is leaking.
3. Do not attempt to repair any service and equipment the cylinder is leaking, call the fire service before the cylinder is leaking.
4. If the cylinder is leaking, contact the hire company immediately.
5. Do not attempt to repair any service and equipment the cylinder is leaking, call the fire service before the cylinder is leaking.
6. In some conditions, frost may form on a gas cylinder that the cylinder is not big enough to provide the flow of gas.
7. Do not attempt to repair any service and equipment the cylinder is leaking, call the fire service before the cylinder is leaking.
