

VISUAL STANDARD

Void Protection

KEY POINTS

- Hole protection to be fixed in place
- Recommend 18mm marine ply or similar strength, good quality material. Steel plates where plant/ vehicles operate
- An approved safe method of removal to be in place before any hole, void, lift shaft or riser protection is removed
- Log (record drawing) kept of all holes
- Planned opening and closing
- Protection highlighted and signed.

Voids can be in the form of apertures in floors, walls, roofs and the ground.

Our standard has a hierarchy of:

- Permanent grates / gates / doors fitted early
- Balustrade / fence / gate
- Temporary cover
