

VISUAL STANDARD

Working around gas flues

When working around live gas you must make all aware that the hazards can be fatal if carbon monoxide (CO) is not vented correctly.

Ensure when possible that:

- Boilers and live gas appliances are isolated by competent gas safe engineer.
- Flues are marked and all are aware of the location and working distances from flues.
- Extra protection is afforded to support the flue pipe from others.

KEY POINTS

- Flues are protected through works, exclusion zones around piped flues are made.
- Emergency Service on 0800 111 999
- Gas procedure tagging system part of RAMS Challenge and induction.
